We are creating a **tool for rapid learning in time of crisis:**

OECO - **O**pen **E**uropean **C**ase study **O**bservatory

Web app and database to create structured data lake
consisting of case studies accross the continent.

Goal is to help **medical workers** accross hospitals and nations
to **improve treatmant strategies.**

Accumulated data can also be analysed by **big data researchers**
to spot trends to **generate hypothesis** for clinical trials.

Focus is **urgent care**, and **optimal treatmant** identification.

In the post-pandemic future the OECO
can **improve agility and resiliance** of European health sector
allowing through pooled and shared data **rapid identification**
of optimal treatmant strategies for new pathogen strains.
